

TODAY'S NEWS

PLACES at the next full seminar on mass gathering vulnerability analysis, are available for Wednesday 27th October, in London. This now includes new sections:

'Consequence Blast Effects Analysis'.

- The National Counter Terrorism Security Office (NaCTSO)'s Crowded Places Vulnerability Self Assessment Tool (VSAT).

If interested in attending, please contact Mike O'Neill on 07768 354009, or email mike@greymans.com

GREYMANS conduct a mass gathering vulnerability analysis seminar monthly, on the last Wednesday of every month. Seminars following October, are 24th November, 2010.

Held in central London or Reading, and other venues if participants gather a quorum.

Contact Mike O'Neill on 07768 354009, or email mike@greymans.com

WE are currently undertaking Buildings and Facilities Vulnerability Reports. These reports:

- Baseline security and risk management.
- Includes hostile vehicle mitigation.

Contact Mike O'Neill on 07768 354009, or email mike@greymans.com for details.

WE are also offering to the Facilities Industry special tailored seminar on mass gathering vulnerability analysis for company group bookings.

These focus on specific sites, as a day workshop.

If interested in discussing further, contact Mike O'Neill on 07768 354009, or email mike@greymans.com

A NEW APPROACH TO MASS GATHERING SPACE VULNERABILITY ANALYSIS

Greymans
Crisis, Risk & Security Management

Currently, Home Office documents such as: 'Working together to protect crowded places'; 'Crowded places: the planning system and counterterrorism', and 'Protecting crowded places: design and technical issues', outline advice for local authorities, police, businesses, planners and architects to reduce vulnerability in crowded places. As well, this includes the new 'The National Counter Terrorism Security Office (NaCTSO)'s Crowded Places Vulnerability Self Assessment Tool (VSAT)'.

Core to these strategies is developing an integrated analysis that links mass gatherings and infrastructure giving designers, owners and operators information on issues relating to generic threats and vulnerabilities associated with the built environment and public gatherings.

Greymans is offering a one-day workshop in central London which will propose a new approach to understanding and managing the vulnerability and security issues around crowded places and mass gathering spaces.

THE SPEAKER: DR CHRIS FLAHERTY FSI.

- Fellow of the UK Security Institute.
- A research team member with the London Metropolitan Business School: Centre for International Business and Sustainability (CIBS).
- Has established an international career in vulnerability and resilience analysis.
- Has pioneered concepts such as 3D tactics, fragmentation and weaponisation of buildings.
- Has developed a counter terrorism building vulnerability analysis for mass gathering commercial, industrial and shopping areas.

Contact: chris.flaherty@greymans.com or join our LinkedIn group: Discuss and debate new international standards in Organisational and Societal Resilience

Topics Covered

- Crowded places & mass gathering spaces.
- Security risk analysis.
- 3D tactics analysis.
- Threat, vulnerability, & consequence.
- Application of the 3D tactics model.
- Vulnerability clusters.
- Significance of deception.
- Short practice session.
